Amaze yourself.

Amaze the world.

Internet Technologies Intern

Job Summary

Imagine what you could do here. At Apple, extraordinary ideas have a way of becoming excellent products, services, and customer experiences very quickly. Bring passion and dedication to your job and there's no telling what you could accomplish.

Our software engineers are the brains behind some of the industry's biggest breakthroughs. OS X, Siri, and iCloud — not to mention the system-level software for iPhone and Apple TV — all started here. This team is on the front line of our constant charge toward innovation.

Apple has numerous web development opportunities for interns throughout the company including publicly facing websites such as iCloud, iWork for iCloud, and apple.com. There are also a wealth of internal web tools that we have developed to track projects, collect customer feedback, and report metrics. We have the same high level of attention to detail with our tools as we do with our customer-facing solutions.

We are actively seeking enthusiastic interns who can work full-time for a minimum of 12-weeks between Fall 2018 and Summer 2019.

Key Qualifications

- Ability to thrive in a highly reciprocal environment focused on learning
- Excellent communication skills
- Strong object-oriented programming experience
- Excellent debugging skills
- Knowledge of Objective-C, C++, or C
- Creativity and enthusiasm for design
- Knowledge of SQL databases and database schema design
- Basic understanding of the OS, graphics, networking, and other sub-systems

Description

We're looking for an engineer to help us craft the future direction of Mail on iOS and macOS. Your impact will extend beyond Mail, as you help drive the iOS and macOS platforms forward. In this role, you'll help us develop new, innovative Mail features while taking existing features to the next level. You are self-motivated, and care deeply about craftsmanship and quality.

Education

Working toward a BS in Computer Science or related field
