Localization Tools Engineering Intern

Job Summary

The Localization Tools team is looking for a highly motivated intern to work on tools and technologies that allow Apple to localize and ship products such as OS X, iOS, watchOS, tvOS, and more across the world.

The environment is dynamic, requiring you to have the ability to work autonomously and handle tight delivery schedules. You should have a real passion for improving existing processes and tools. The right mix of technical, organizational, and communication skills are key to your success. Your attention to detail and ability to prioritize is essential.

For this position, you will work on our internal tools and processes used to localize Software and Documentation content. As more content is getting localized through these processes, we are looking into ways to improve our tools to ensure they will scale accordingly. Researching ways to enhance our leverage mechanism will also have a significant impact in this effort.

Some Responsibilities Include

- Performing data analysis and data visualization
- Designing, developing and improving internal tools
- Working with teams across Engineering to add support for new software features

Key Qualifications

- Strong object-oriented programming skills
- Strong analytical and critical thinking skills

- Experience with relational databases and SQL
- Excellent written and verbal communication skills

Additional Requirements

- Programming in Objective-C or Swift
- Scripting programming
- Fluency in a second language

Education

Currently enrolled for MS/BS in Computer Science (or equivalent major)

Apple is an Equal Employment Opportunity Employer that is committed to inclusion and diversity. We also take affirmative action to offer employment and advancement opportunities to all applicants, including minorities, women, protected veterans, and individuals with disabilities.
